

The **Customer Sales Dashboard** provides an interactive overview of customer behavior and sales performance. It displays key performance indicators (KPIs) such as the **total number of customers (3.9K)**, **average purchase amount (\$59.76)**, and **average customer review rating (3.75)**. The dashboard also enables us to analyze sales and revenue across different product categories while also examining customer demographics.

Interactive slicers for **Subscription Status**, **Gender**, **Product Categories**, and **Shipping Type** allow users to dynamically filter the data and gain deeper insights. Visualizations include the distribution of subscribers, revenue and sales by product category, and revenue and sales across different age groups, making it easy to identify trends and compare business performance.
